

Science Instructions

You will remember from last week that sounds are produced by vibrations. You can feel these when you put your fingers against your throat and talk.

1) Watch the following clips to learn how sound travels to the ear and to remind yourself of how sound is produced.

[Understanding sound - KS2 Science - BBC Bitesize](#)

[How do humans hear? - BBC Bitesize](#)

2) Read through *The Science of Sound Lesson Presentation* to learn a little bit more about how sound travels to the ear.

3) Before starting the activity, you may want to do a bit more research for yourself. Use the internet to do so by typing in the following:
How does sound travel to the ear?

4) Complete the *Science of Sound Activity*.
