

Year 1 Maths Home Learning

This week we have been sorting and counting objects. We have been sorting by colour, shape, length, size and more!

We have come up with three top counting tips!

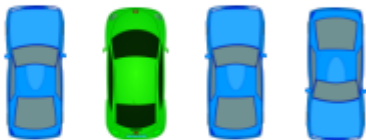

- 1) Count slowly
- 2) Put your objects in a line as you count
- 3) Tap each object as you say the number name

Can you solve the problems below?

Eva has grouped these cars into 3 groups.

One group has 3 cars.
One group has 1 car.
One group has no cars.

How could Eva have grouped the cars?

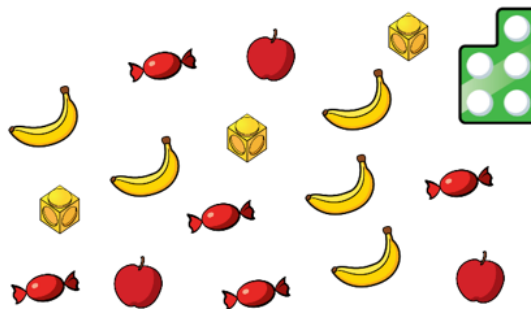

Eva could have grouped the cars by colour e.g. Blue cars, green cars and red cars. There would be zero cars in the red group.

Eva could have grouped the cars by the way they are facing e.g. Facing forward, facing backwards and facing sideways. There would be zero cars in the sideways group.

How many different ways can you find to group the objects and find the total?

How many different ways can the objects be grouped?

Mrs Welsh is extremely proud of how well the Year Ones have settled into their Maths group this week!
