

Subtracting a 2-digit number from a 2-digit number.

$$34 - 15 = 34 - 10 - 4 - 1 = 19$$

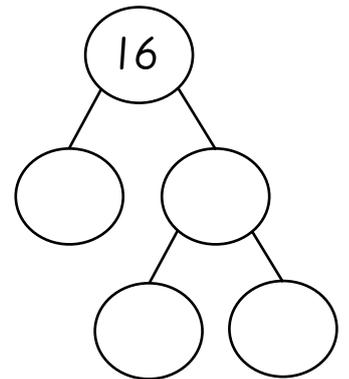

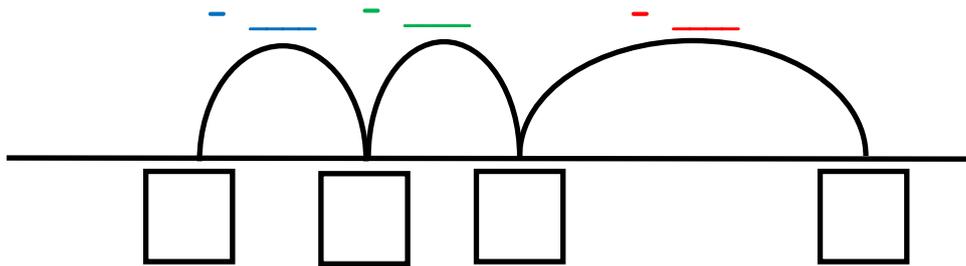

Step 1; Subtract the 10s.

Step 2; Subtract the number of ones to reach the previous multiple of 10. (you will have to partition the ones you are subtracting)

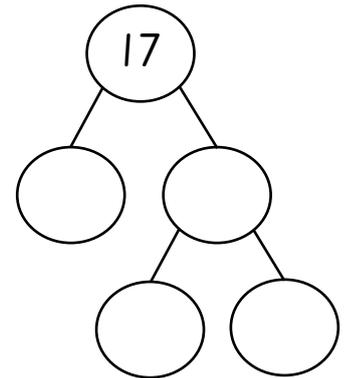

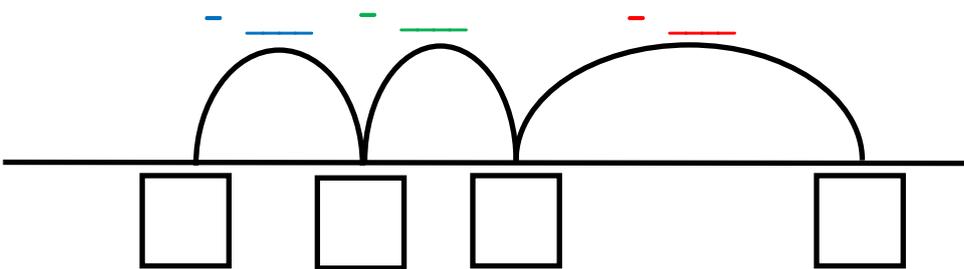

Step 3; Subtract the remaining 1s (use number bonds to 10 to help you and check your answers)

Use this method to solve these calculations

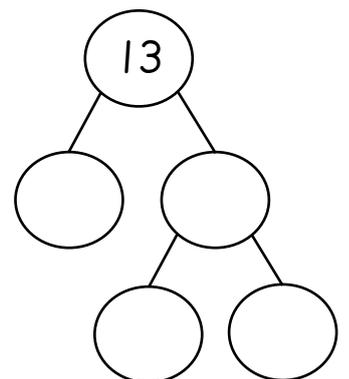

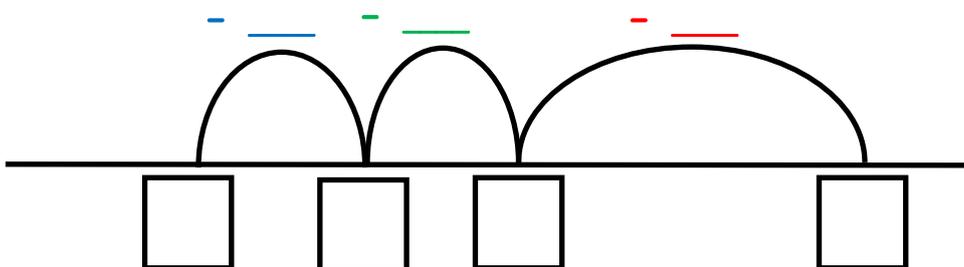

$$32 - 16 = 32 - \underline{\quad} - \underline{\quad} - \underline{\quad} = \underline{\quad}$$

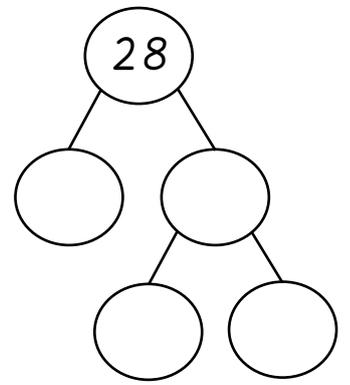

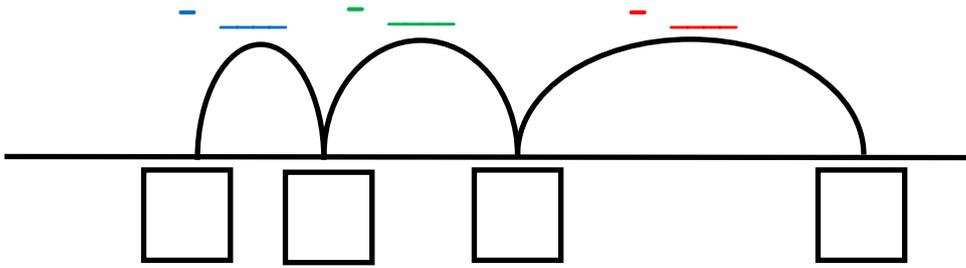

$$43 - 17 = 43 - \underline{\quad} - \underline{\quad} - \underline{\quad} = \underline{\quad}$$

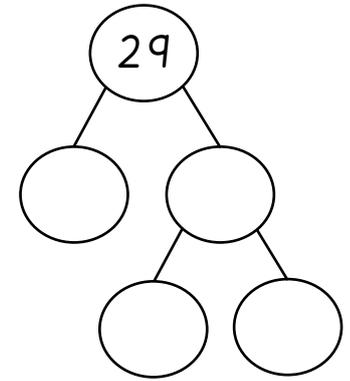

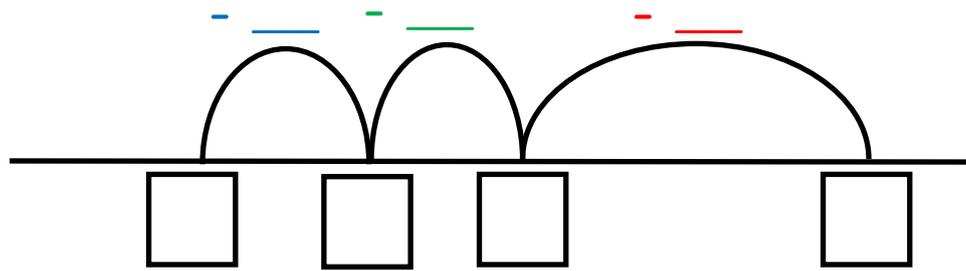

$$51 - 13 = 51 - \underline{\quad} - \underline{\quad} - \underline{\quad} = \underline{\quad}$$

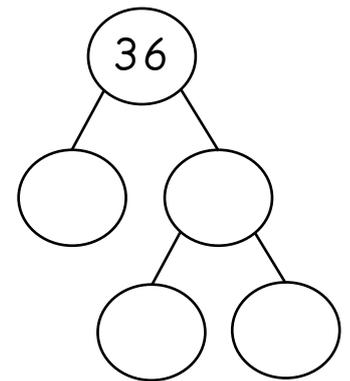

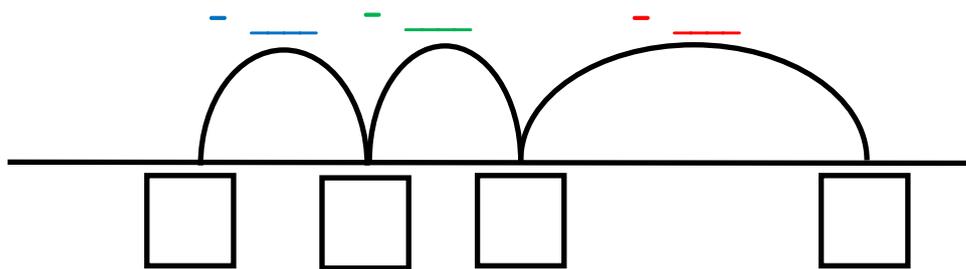

$$55 - 28 = 55 - \underline{\quad} - \underline{\quad} - \underline{\quad} = \underline{\quad}$$

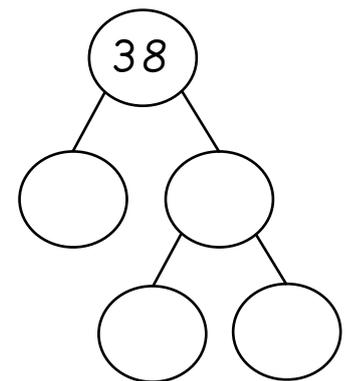

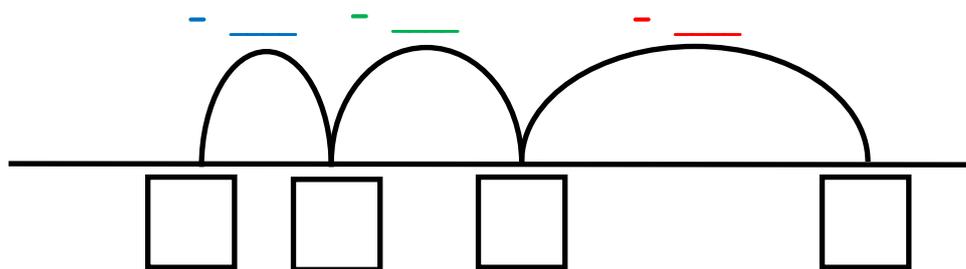

$$64 - 29 = 64 - \underline{\quad} - \underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$71 - 36 = 71 - \underline{\quad} - \underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$67 - 38 = 67 - \underline{\quad} - \underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$86 - 49 = 86 - \underline{\quad} - \underline{\quad} - \underline{\quad} = \underline{\quad}$$
